

PLATFORM OVERVIEW

The Engineering Intelligence Platform

Company intelligence, supplier discovery and AI lead matching

The MAQE innovation

An engineering super-database that powers lead and supplier intelligence.

Basic company records are ingested from the relevant government company registration source.

Public sources build a detailed picture of what each company does, who it may work with and who it may sell to.

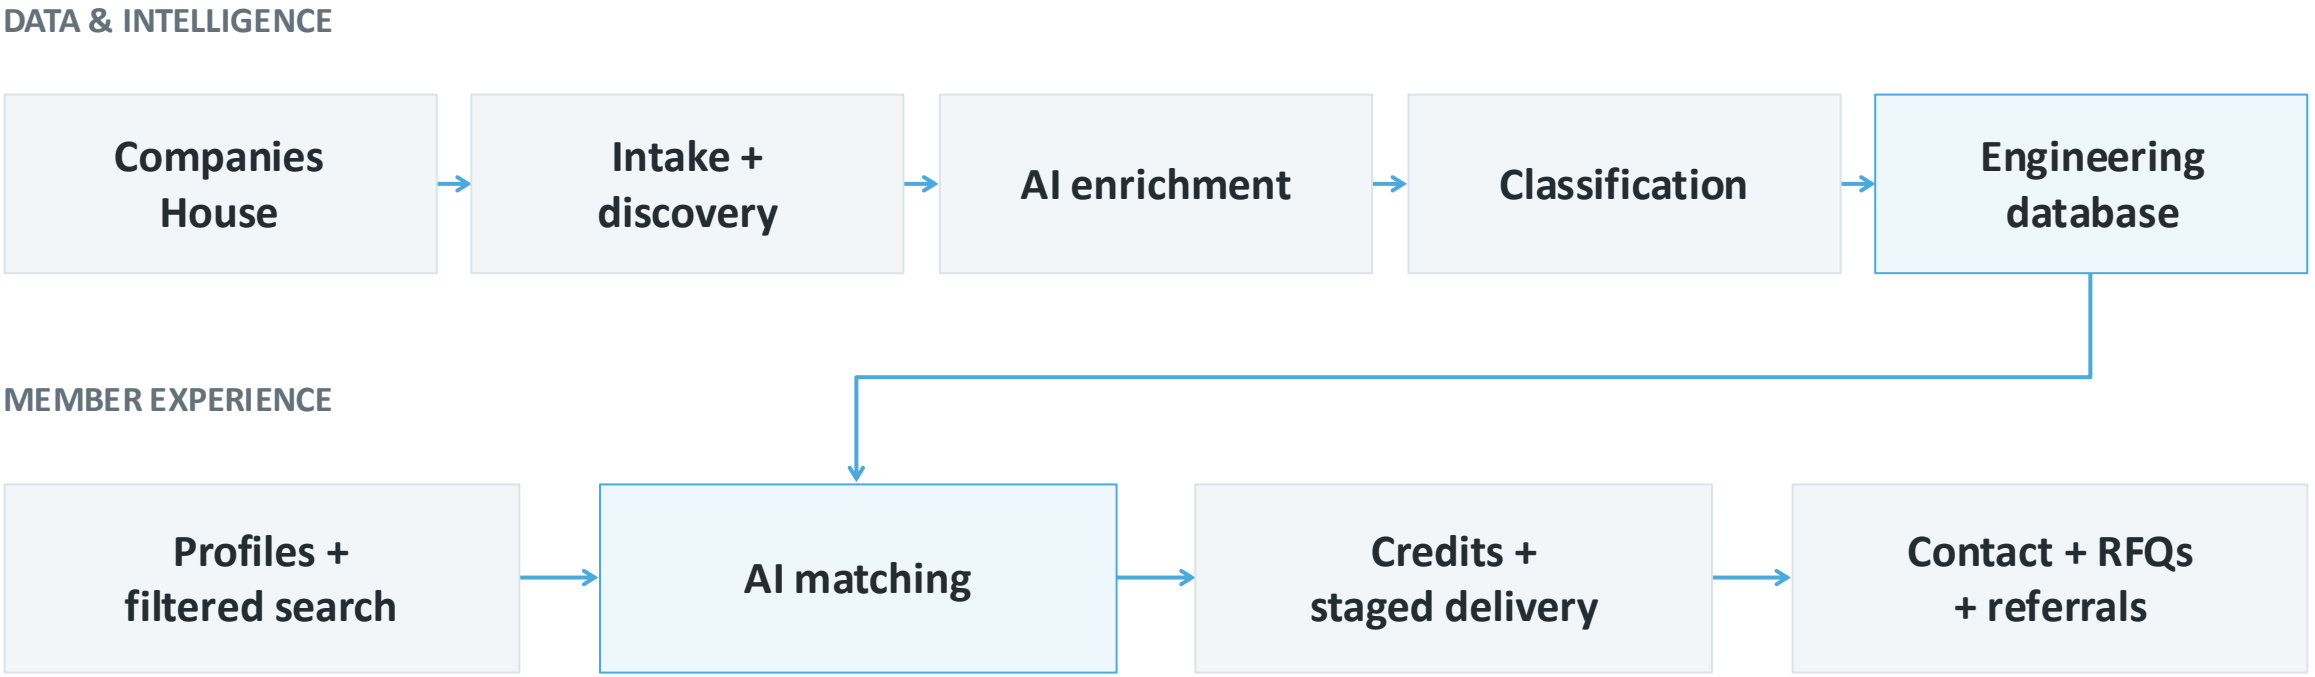

The engine matches suppliers and potential clients using the structured information built by enrichment.

Users connect through MAQE to build credibility and support the flow of leads.

Company input is not required to build the intelligence or generate matches.

The full platform flow

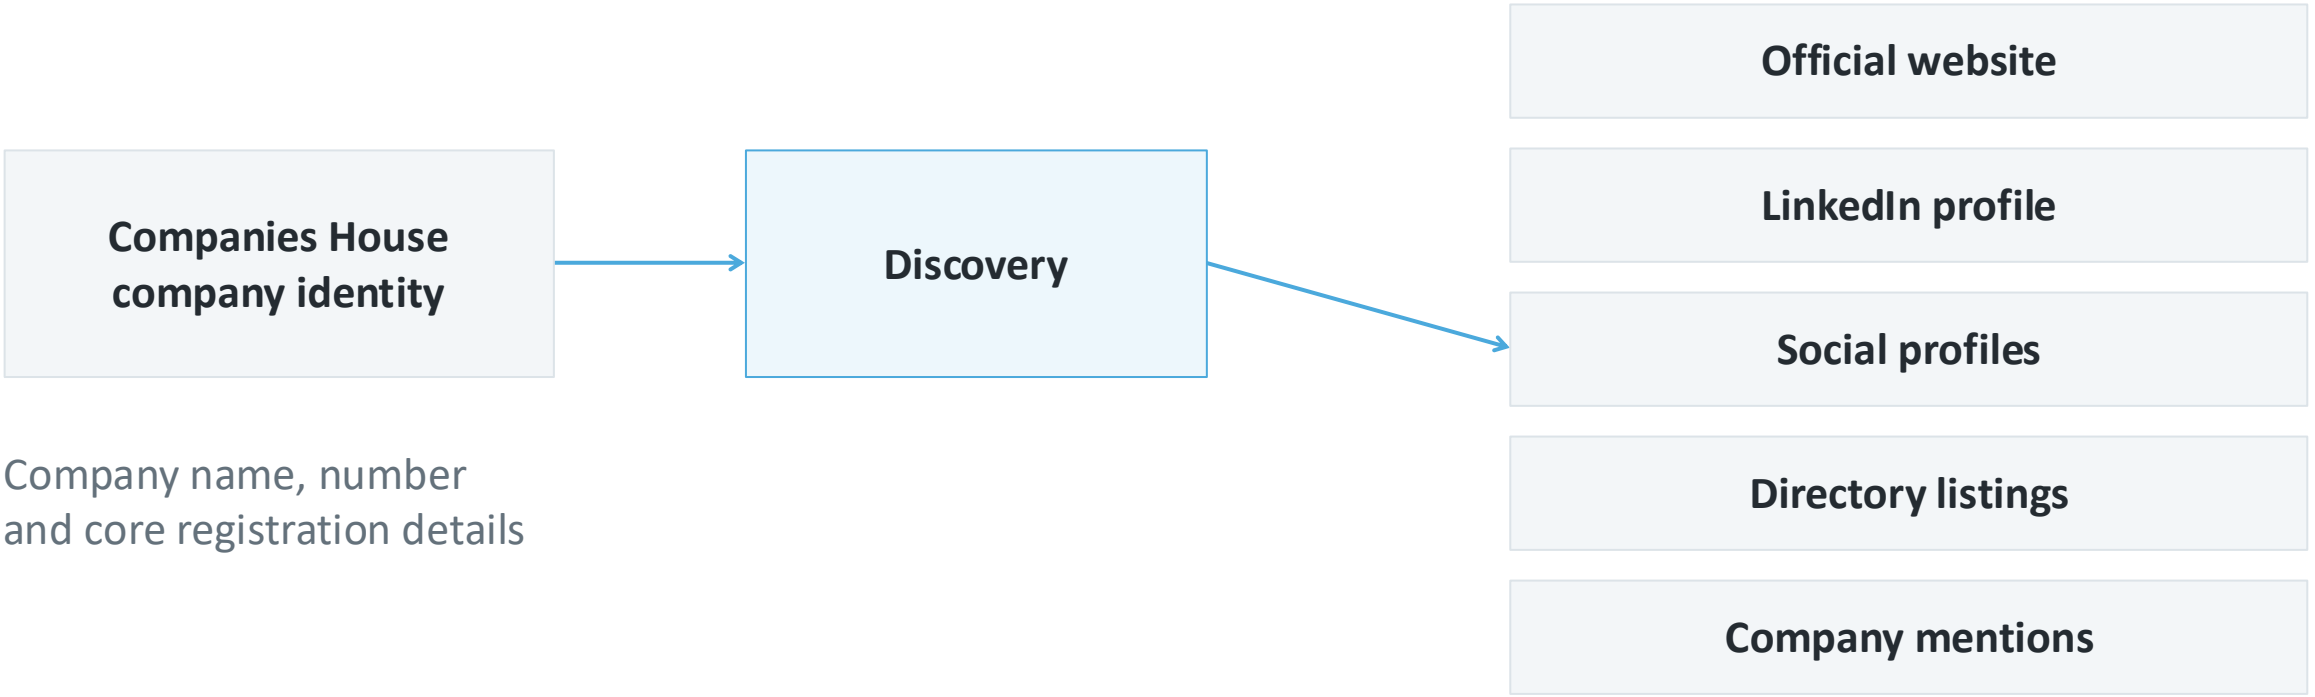

A shared intelligence database powers the member experience.

Membership determines access. Claims and member updates contribute to the company profile.

Companies House intake & discovery

Establish the company record, then locate relevant online evidence.

Company name, number and core registration details

Associate candidate sources with the correct business before they feed enrichment.

AI enrichment & classification

Convert discovered evidence into a consistent company profile.

01

Extract

Capabilities, products and services

02

Structure

Normalised company profile fields

03

Classify

Engineering categories and markets

04

Interpret

Potential supplier and customer relationships

Retain evidence for profile statements and distinguish observed facts from AI inference.

Structured company intelligence

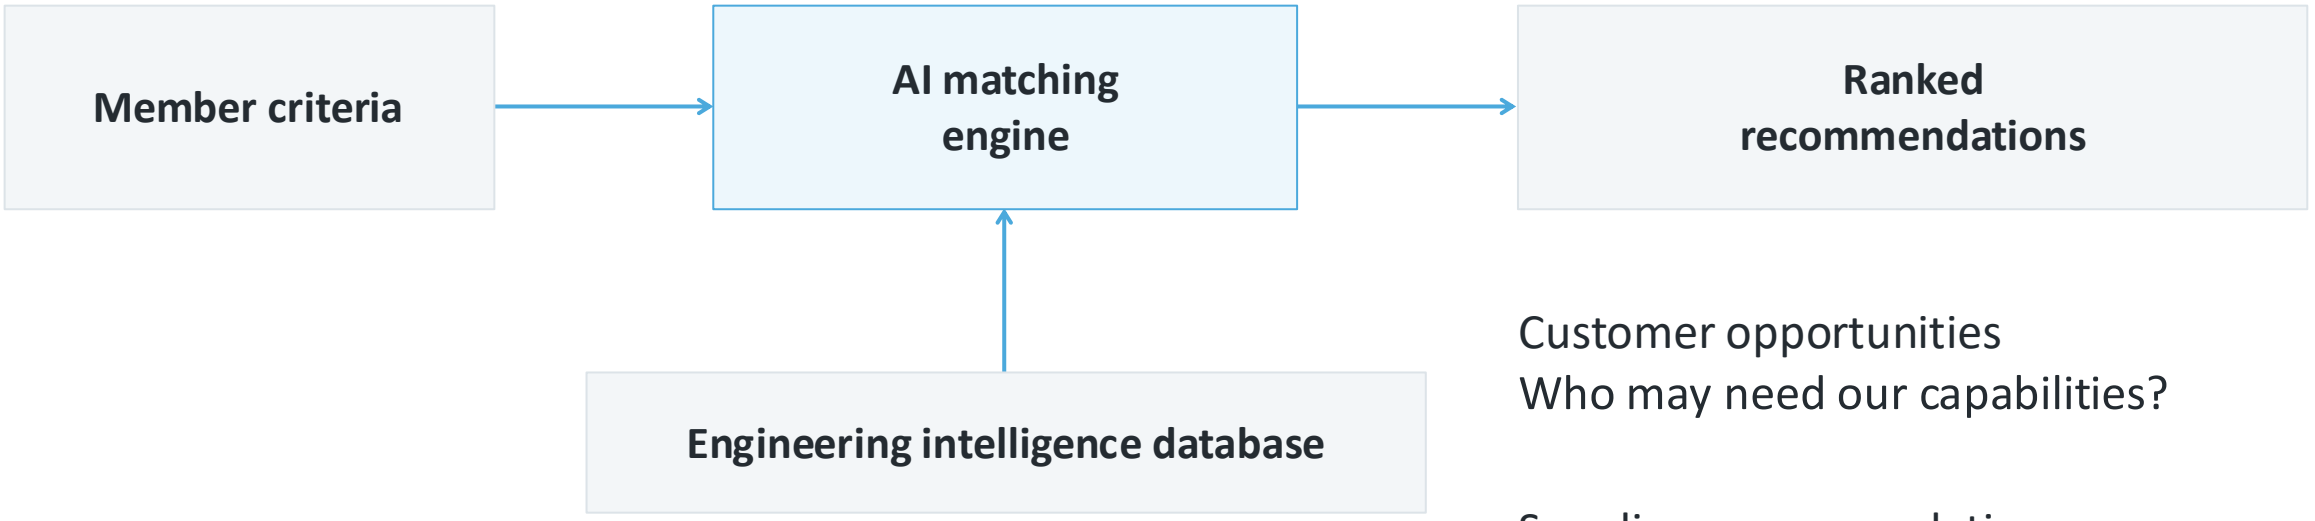

Each profile describes the company’s role in the engineering supply chain.

PROVIDES	Products, processes, capabilities and services
USES	Materials, components, equipment and services
SERVES	Industries, markets and customer types
LIKELY NEEDS	Potential future requirements inferred from its activity
RELATIONSHIPS	Known or inferred supplier and client connections

Evidence and inference remain distinct so members can judge the basis of a recommendation.

AI matching

Match what a member offers or needs to relevant companies.

Customer opportunities
Who may need our capabilities?

Supplier recommendations
Who can meet our requirements?

The matching engine determines relevance. A separate allocation step controls delivery.

Matching example: Delta Metalworks

Illustrative company producing sheet metal from raw materials for manufacturers.

SUPPLIER MATCHES

Raw metal suppliers
Metalworking equipment
Facilities and logistics

Produces sheet metal for parts, components and assembly manufacturers

CUSTOMER LEADS

Manufacturers that potentially use sheet metal in their production

AI identifies companies on both sides and ranks them using classification criteria.

Premium delivers ranked supplier recommendations and customer leads within the monthly allowance.

Membership levels

Contact permissions expand alongside search access and lead intelligence.

FREE

Claimed listing

Verify ownership of a visible company listing.

Receive contact through MAQE.

Inbound contact only.

PAID

Enhanced listing

Everything in Free, plus profile editing and filtered search.

Find suppliers and leads yourself.

Receive contact and initiate outreach through MAQE.

PREMIUM

Intelligence + outreach

Everything in Paid, plus AI matching and monthly credits.

Build lead sets and contact recommended companies directly.

Keep a basic log of who has been contacted.

Illustrative membership tiers and entitlements, subject to final definition.

Premium matching & monthly credits

Members configure criteria, then receive relevant recommendations in stages.

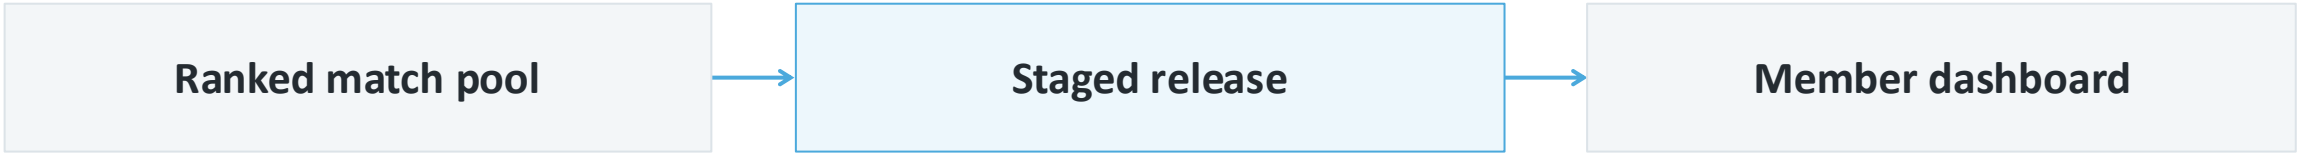

MATCHING CRITERIA

Customer or supplier focus
Capabilities and services
Sectors and geography

MONTHLY CREDIT OPTIONS

10 / 20 / 50 / 100

Illustrative allowances

Credits control delivery volume. Track prior deliveries to avoid repeated companies.

Tiers, credits, cadence and credit consumption rules are illustrative and subject to final definition.

Contact, messaging & RFQs

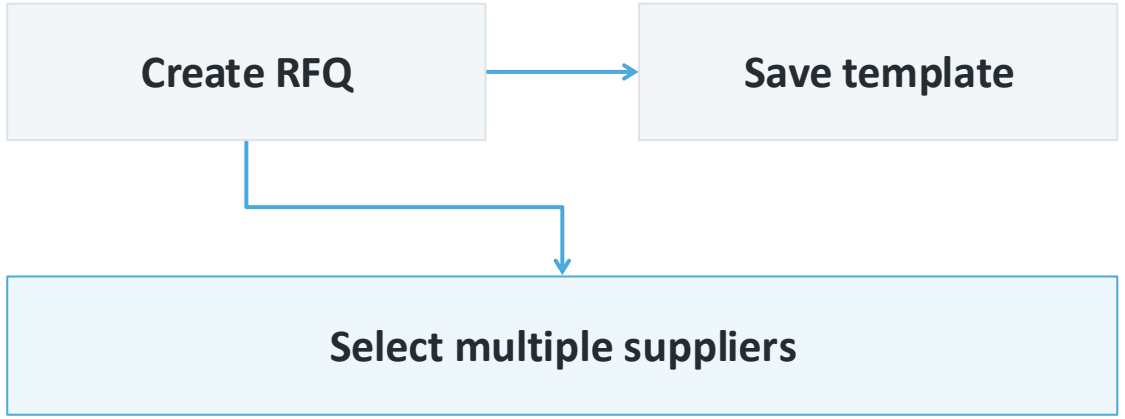

Paid and premium members can initiate contact through MAQE.

Company contact

Free claimed listings can receive contact.

Paid members find companies and reach out. Premium members build lead sets, contact matches and log who they have contacted.

Requests for quotation

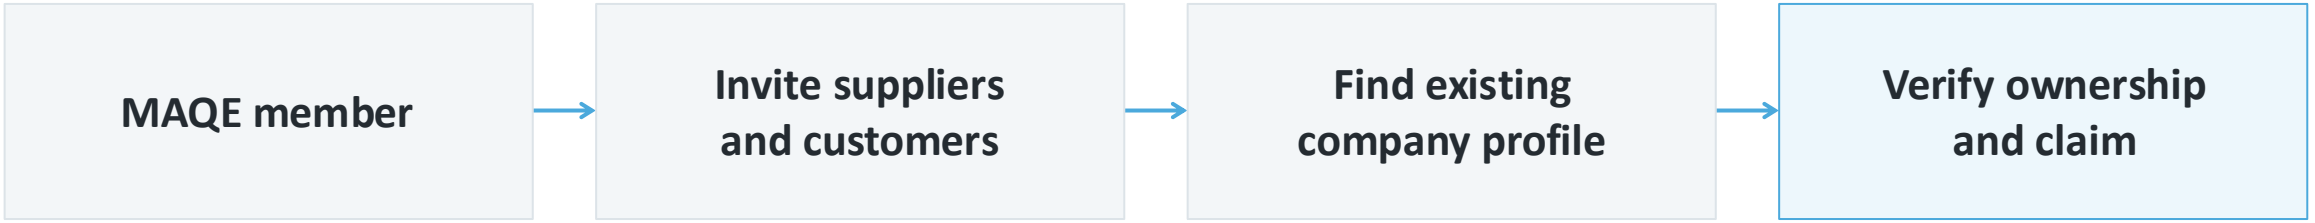

Send and manage enquiries through MAQE

RFQ = request for quotation. Detailed communication rules belong in the technical addendum.

Referral invitations & profile claims

Members invite the companies they already work with into the network.

Existing relationships

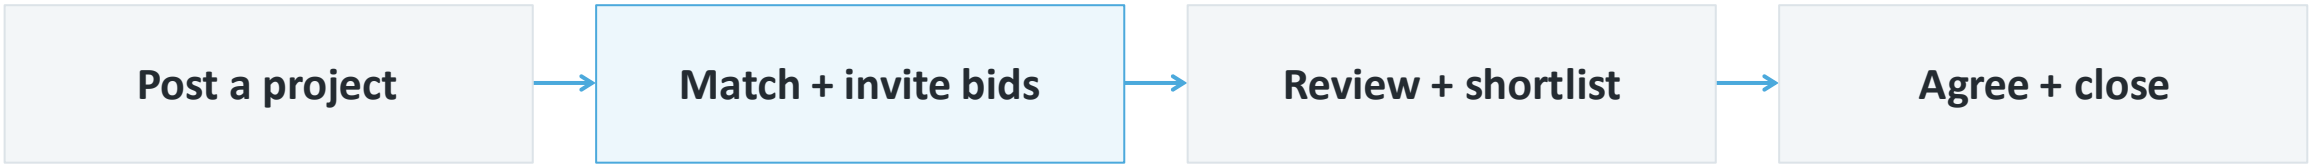

Make invitations easy for a member's commercial contacts.

One company, one profile

Link invitations to existing records and check for duplicates before creating a profile.

Project opportunities

A later module for posting projects and selecting relevant suppliers.

Products to build, services, consultancy or installations.

Categorise the project and show it only to relevant suppliers.

The client reviews bids and chooses suppliers to speak to.

Communicate and agree the deal through MAQE, then close the project.

CONTROLLED BIDDING

Verified suppliers on a paid plan use credits to bid.
Limit participation, for example to 10 suppliers per project.

Later module, beyond Phase One. Bid limits and credits are illustrative. Project payments stay outside MAQE.

Future integrations

A later stage could connect MAQE leads to the systems members already use.

Salesforce

Lead and CRM workflows

Gmail + Zoom

Communication and meetings

ClickUp + Trello

Task and workflow management

Members could push leads into their own tools and continue their existing workflows.

Outside the first launch. Named integrations are future possibilities, subject to scope and feasibility.

Four build phases

A high-level sequence for the principal platform components.

01	**Data foundation**	Intake, discovery, enrichment and classification	Engineering super-database
02	**Member platform**	Profiles, claims, subscriptions and filtered search	Usable directory and member access
03	**Intelligence**	AI matching, criteria, credits and delivery	Customer and supplier recommendations
04	**Networking**	Messaging, outreach logs, RFQs and referrals	An active engineering network

Development groupings only. Release timing and final scope remain to be defined.
